

Environmental Policy

FB Contracting is committed to minimizing our environmental footprint. We understand the importance of sustaining the natural environment and we endeavour to conduct all construction activities mindfully. FB Contracting shall minimize the generation of solid and liquid wastes at all work sites. Where wastes are generated, they will be stored, transported and disposed of appropriately with special care being taken to implement any recycling opportunities.

We recognise that our activities have the potential to interact with the environment and aim to minimise these interactions by integrating environmental considerations across all aspects of our business. We also recognise the requirement to comply with all applicable laws and regulations governing protection of the environment.

Sustainable construction practice is an integral part of our business. We will maintain and enhance this by:

- Establishing Environmental Management Systems for the identification, classification, assessment and review of all issues relating to environmental management.
- Continuously improving our services by setting measurable goals, providing / supporting ongoing training and constantly monitoring and reviewing the effectiveness of the management system.
- Provide services that meet or exceed relevant statutory legislation, industry guidelines, appropriate Australian and International Standards and applicable contracts.
- Minimising adverse impacts from our activities on the environment, and requiring our sub-contractors to do the same.
- Maintain certification to ISO 14001:2004 standard and identifying specific environmental risks that could occur as part of a project and implementing measurable objectives and targets to minimise this risk.
- Requiring each sub-contractor to provide a work method statement documenting consideration of their potential to cause adverse impact on the environment, and methods to minimise this risk.
- Promoting environmental awareness throughout our company and our sub-contractors through regular training.
- Requiring each person working on a project to be informed of and aware of their role in relation to environmental protection, and methods to reduce environmental risk.
- Identifying best practice environmental management procedures where possible to set an example to other companies in our sphere of influence.
- Promoting waste, water and energy reduction measures to our customers during the design and construction phases.
- Implement site specific Environmental Management Plans.
- Maintaining effective communication and / or training to our employees, contractors, clients and visitors to ensure that environmental management practices are undertaken.
