

Environmental Policy

FB Contracting is committed to minimising our environmental footprint. We understand the importance of sustaining the natural environment and we endeavour to conduct all construction activities mindfully. FB Contracting shall minimize the generation of solid and liquid wastes at all work sites. Where wastes are generated, they will be stored, transported and disposed of appropriately with special care being taken to implement any recycling opportunities.

We recognise that our activities have the potential to interact with the environment and aim to minimise these interactions by integrating environmental considerations across all aspects of our business. We also recognise the requirement to comply with all applicable laws and regulations governing protection of the environment.

Sustainable construction practice is an integral part of our business. We will maintain and enhance this by:

- Establishing Environmental Management Systems for the identification, classification, assessment and review of all issues relating to environmental management;
- Continuously improving our services by providing and/or supporting ongoing training and constantly monitoring and reviewing the effectiveness of the management system;
- Ensure continual improvement in environmental performance is achieved by providing a framework for setting objectives and targets, measuring progress and communicating results.
- Ensure that our employees, subcontractors, suppliers and consultants are aware of and have the necessary skills to fulfil their environmental obligations with respect to FB Contracting's operations;
- Maintain certification to ISO 14001:2015 standard and identifying specific environmental risks that could occur as part of a project and implementing measurable objectives and targets to minimise this risk;
- Communicate the Environmental Policy and procedures to all workers;
- Provide a framework for the identification of Environmental risks and opportunities relevant to the size, nature and context of the organisation and its activities;
- Make strategic decisions based on the Environmental risks and opportunities present that allow the organisation to work towards achieving sustainable development, environmental protection and the reduction of the organisations energy consumption and carbon footprint;
- Strive to conserve resources, reduce waste and eliminate or minimise adverse environmental effects and risks that may be associated with our services and operations in consultation of the Hierarchy of Controls;
- Work with our interested parties to help them achieve their environmental objectives and obligations;
- Maintaining effective communication and / or training to our employees, contractors, clients and visitors to ensure that environmental management practices are undertaken.
